💭 Plan....

Week 1&2

---

1. WSDB database

table
rows: objects
columns: properties (positions, magnitude...)

---

2. psql: interact with the database (SQL)

how to structure queries

---

3. WSDB access from python

---

4. SExtractor

How does class star/spread model work in classification

---

5. Start with smaller dataset

plot classification (point + extended) [class star/spread model] VS magnitude
How well does class star/spread model work in classification

🤨 Questions

1. How much of Euclid catalogue can be trusted
2. Where the saturation limit is
3. How to avoid misclassification

🧐 Add.

1. claude code cli (keep code organised, updated, track)
2. GPT personalisation: I am a astro student, when giving responses....

3. Aladdin. Apt. Download
4. crush: connect to LLM (which..)
