Information on accessing the Whole Sky Database

Please make sure to save the information from this page, as it will be deleted.

Wiki

Wiki address:
https://wsdb.wiki.ast.cam.ac.uk/index.php/WSDB(Whole_Sky_DataBase)_Wiki

The list of all available catalogs is here:
https://wsdb.wiki.ast.cam.ac.uk/index.php?title=WSDB_List_of_catalogs

Wiki access from Institute of Astronomy, Cambridge computers is unrestricted. From any other location, you need to use the login and password.
Wiki login/pass:
WSDB
m3J!maH4

Database

Database machine: wsdb.ast.cam.ac.uk
Database login/pass:
siwei_zhao_2025
3gGTl~bbLm

Please make sure to keep the password secret (i.e. do not commit your password to public repositories)

By default the access to the database machine is restricted to ONLY IoA/IfA/CMU/UCL IP addresses (i.e. 131.111.*, 128.237.* , 192.108.*, 192.41.*, 128.2.* , 128.40.*, 128.41.* ,*144.82.8.**), so *IF* your computer will be accessing not from IoA, IfA, CMU or UCL addresses, you MUST tell Sergey what is the IP. See https://www.whatismyip.com/
Or give me an approximate IP-range used by your university. I.e.
211.111.0.0 -211.111.255.255 then you'll be able to access from any IP in the range.

Python access

To access the DB from python visit this page
https://wsdb.wiki.ast.cam.ac.uk/index.php?title=WSDB_Access_from_Python
I suggest to use sqlutilpy package https://github.com/segasai/sqlutilpy

You should be able to install it using
$ pip install sqlutilpy

Suggested first steps

1) Save this page locally/or at least save login/passwords and addresses
2) If you are not in Edinburgh/Cambridge/CMU/UCL networks, find out your IP(IP range) and tell it to Sergey
3) Install sqlutilpy in python
4) Try a simple query using sqlutilpy.get() it will require credentials given above
5) Save the credentials in .pgpass file to avoid typing password all the time (more details are on the wiki)
